

AIR BAG

ABSTRACT

An air bag having a connecting piece that connects a rear section and a front section, in which the outer surface of the front section is smooth, and connection of the panels by sewing is facilitated. The air bag includes a front upper panel, a front lower panel, and a rear panel that constitute an outer shell, and a mid panel is placed therein. The front upper panel includes a body portion, and an extending piece extending from one edge of the body portion. A lower edge of the mid panel and a lower edge of the extending piece are sewn together at seams inside the air bag. Seams to and to formed by sewing the edges are placed inside the air bag. As a result, seams are not exposed on the front face and side faces of the air bag, and the faces are smooth.
